Safety Information from Manufacturer.

When it comes to testing, we have followed the lead of the Original Equipment Manufacturers (OEMs). We have well-established relationships with all of them, and we are the exclusive nationwide distributor for one of them, which means we had to meet their high standards to be selected. We have toured their facilities and worked with their engineering teams. The OEMs know and understand seatbelt safety better than anyone. We have replicated the OEMs test procedures and equipment at our own facility. Our test facility has a "G" Force Machine, Tilt Lock Testing Machine, Webbing Abrasion Tester, Salt Spray Tester and two Tensile Machines (44482.216152548, kN, 10,000 lb. and 22241.108141273, kN, 5,000 lb.), and a Retractor Cycling Tester. We are very fortunate to have some of the best engineers on our staff. They come from companies like Pratt & Whitney, Motorola, United Technologies and Sikorsky to mention a few. We test to the most current FMVSS 209/302 certification. We have also started 208 testing (sled or crash testing like you see on commercials) for our most popular products. A lot of other seatbelt companies talk about safety, but we have fully committed to testing and guaranteeing product safety every day. We are the only aftermarket seatbelt manufacturer that will provide current test results on the products you purchase from us. You won't find a company and staff more dedicated to making safe seatbelts.
