

## Optional Gear Indicator Mounting

To mount the optional gear indicator gauge, you will need a new lens (included), two 8-32 x 3/8" screws (included), and the original mechanical gear indicator assembly.

- Remove the pointer from the original mechanical gear indicator assembly.

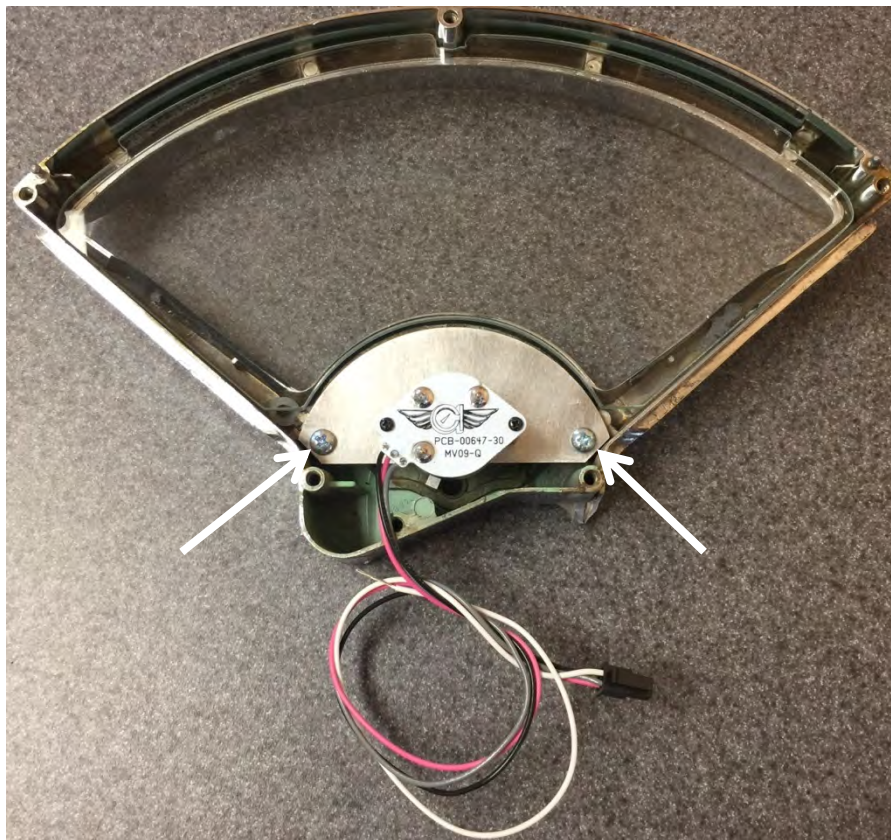

- Place the new lens in the gear indicator opening of your bezel. Then, place the modified original mechanical gear indicator assembly over the lens.

- Place the new gear indicator gauge on top of modified indicator assembly and secure in place using the two 8-32 x 3/8" screws.

- Continue with the mounting instructions for the main gauge cluster. Route the gear indicator harness through the access hole in the gauge cluster housing when mounting the gauge cluster to the bezel, and then plug into the gear indicator socket on the gauge cluster.
