Heater Control Valve

013 Control Valve

If your car came equipped with this style Heater Control Panel in the dash, you have a Deluxe Heater.

We duplicated this Deluxe Heater Valve exactly from Chevrolet from New Old Stock. It is identical to Chevrolet’s original valve. However, you may notice that your original valve used a temperature capillary tube. Chevrolet discovered that the capillary tube was not needed, and replaced it during later production with a small clip which we supply on our valve. If you wish, you may replace the clip on your new valve with the original tube.

Attention: Nylon tie-strap is for shipping purposes only. Please remove tie-strap before installation.

Additional items that may be needed.
