Window Fur Channel Kits

Installation of Fur Strips (3/8" Flat Dusters)
1. Remove old staples by twisting up end and cutting off. If the original fur is no longer present look for remains of old staples or staple holes for more accurate location of fur strips.
2. On the exterior side of the front doors place new fur strip which are located approximately 1-1/4" from the top edge of the door belt moulding #15671 (DS) and #15672 (FS). On the interior garnish moulding the fur strip is approximately 1/2" down from top edge. Use the original staple holes to help you locate correct positioning. The fur strips was positioned low so no contact with the chrome window frame #1447 would accrue when window is rolled down. Be sure and check and see if the rollers #2082 and #14790 need to be replaced.
3. Hold fur and drill a 5/64" (.078") hole at one end, and progress towards the other end. Space holes about 6" apart. Using screws supplied in kit to attach fur strip.
4. On the rear quarter window place new fur strips on both the garnish moulding and outer body trim, insuring that the stainless beading is even with the top just above the edge.
5. Hold fur and drill a 5/64" (.078") hole at one end, and progress towards the other end. Space holes closer on curved components. Using screws supplied to attach fur strip.

CAUTION: Do not start at each end and work toward center. Drill each hole one at a time and install screw. This insures more accurate alignment.

6. Twist heads of screws with screwdriver to sink it into fur pile. The head of the screw should draw into the pile enough so it becomes invisible.

Installation of Division Bar (Non-Flexible U-Channel)
1. The complete vent window assembly must be removed from the door. This is also a good time to replace the vent window seal, Our part # 565.
2. The Division Bar Channel originally came in two pieces The Division Bars Stops, part # 147 should be replaced at this time. Ours is one piece to simplify installation.
3. Drill out four rivets holding original fur channel. This will let the top part of the assembly to come apart. Install the new Division Bar, using hardware included in screw kit.

Installation of Moleskin (Flat Strip of Fur)
1. The 19" Moleskin fits in the channel that is bolted to the back area of the door (See C in Diagram below). The chrome frame # 1447 and door glass will slide up and down in it.
2. The 33" moleskin is located in the rear quarter, in the long curved window guide (See G in Diagram below).
3. To install, remove old moleskin, degrease surface, and apply glue. You can use our # 036 3M Super Weather-stripe Adhesive.

Kit Includes:
A. 2 - 32" Division Bar Channels
B. 4 - 3/8" x 24" Fur Strip
C. 2 - 19" x 1-5/8" Moleskin
D. 2 - 3/8" x 19-3/4" Inner Fur Strips
E. 2 - 3/8" x 20-1/4" Outer Fur Strips
F. 2 - 3/8" x 3" Outer Fur Strip
G. 2 - 33" x 2-5/8" Moleskin
1 - Screw Kit
